Open questions

These decisions are still open. Tick each one off as you decide, and note the answer in the GDD or TDD.

Design

- [ ] Does Sync carry over between fights, so a run builds toward big dual techs?
- [ ] Do downed heroes stay down between fights, or come back at 1 HP?
- [ ] Is there an easy mode with permanently wider zones, or is Amp the only help?
- [ ] Should a player be able to block enemy attacks with a timing hit (for example, Brick's hold)?
- [ ] Do Holy charge and Overclock volley, the two dual techs with simultaneous inputs, make the first release?
- [ ] What's the setting and story hook? The pitch has mechanics but no world yet.

Proposed rules to confirm

The GDD now has a proposed answer for each of these, from the design critique. Confirm or change each one.

- [ ] **Targeting:** default to the last enemy hit, retarget from the command menu, and Prism shot does 60% to each enemy when several are alive.
- [ ] **Starting a dual tech:** any hero with a full bar starts it, and the inputs always run in the table's order.
- [ ] **Tempo:** beats always snap to the music grid (Bell warden = double-time, Slow tempo = half-time).
- [ ] **Amp and Hair trigger:** they stack, capped at 2x the base window.

- [ ] **Upgrade draws:** 4 picks per run, a pool of 15 including 3 new Sync upgrades, no duplicates, and the 3 offers can't all be for one hero.
- [ ] **Cut fallback:** if encounters 2 and 4 are cut, the golem rings the bell after it overheats.
- [ ] **Score weights:** 100 per perfect, 2 per second under 20 minutes, minus 3 per point of damage taken.
- [ ] **Edge cases:** heroes act before enemies on a tie, shields stack up to 40, and the fight ends the moment the enemy hits 0 HP.

Tech

- [ ] Which engine? Keep the browser prototype's code, or move to Godot, Unity or another engine?
- [ ] Which platforms ship first: browser, desktop, mobile? This decides touch support and latency calibration.
- [ ] How is the music made, and at what tempo? Lumen's beats depend on it.

Production

- [ ] Is the goal a store release (itch.io, Steam) or a portfolio piece?
- [ ] What's the timeline? The one-month plan was removed, so the milestones in the TDD have no dates.
- [ ] Who makes the art and audio: you, asset packs, or a collaborator?
